PROJECTS & EXPERIENCE

AUJ / Aouj - Smart Retail Shelf System | Senior Capstone Project

2025-2026

ESP32 · MQTT · PostgreSQL · FastAPI · Prophet · WebSocket · Power BI · React

- Engineered full-stack ETL pipeline from 3 ESP32 sensor nodes through MQTT into PostgreSQL (8-table schema, 4+ indexes); exposed 30 REST endpoints via FastAPI with real-time WebSocket layer.
- Built Power BI dashboard (5+ KPIs) for non-technical stakeholders; delivered demand forecasting with Prophet on 6-month dataset to automate restocking decisions.

Sadeed - Data Quality & Validation Platform | GASTAT Hackathon | Finalist

2025

 [github.com/malikaalnajjar/Sadeed_GASat_Hackathon](#)

FastAPI · Redis · Great Expectations · One-Class SVM · AWS ECS Fargate · Local LLM · Browser Extension

- Architected 3-layer ETL validation (schema checks, statistical profiling, ML anomaly detection via One-Class SVM) across 3-5 GASTAT government datasets with zero labelled training examples.
- Deployed on AWS ECS Fargate with Redis caching (60%+ latency reduction); automated Arabic data quality reports via local LLM with zero data leaving the government network. Reached finals out of nationwide competing teams.

Tayseer - Autonomous Wheelchair Edge Pipeline | AVITHON 2025 (GACA)

Top 15 Nationwide / 500+ Teams

NVIDIA Jetson Nano · ROS · LiDAR · Intel RealSense · TLS 1.3 · AES-256

- Built 2-source sensor fusion pipeline (LiDAR + depth camera) on Jetson Nano for real-time obstacle detection; designed TLS 1.3/AES-256 security architecture. Field research at KAIA Jeddah Airport. Ranked Top 15 nationwide out of 500+ teams at AVITHON 2025 by GACA.
